

General

How can I put two active Qlogic FC switches into a stack?

1. On both switches, check all zoneset names, zone names, and host nicknames to ensure all are unique, and there will be no conflicts
2. Ensure the domain ID of each switch is different
3. Connect the switches to each other, either via 10/20Gbps XPAK stacking cable, or by connecting two standard ports together in "E" mode
4. Merge the zoning
