

General

How can I modify zoning on a Qlogic SANbox via telnet (CLI)?

Example steps to zone a Qlogic switch from scratch are below. The appropriate steps can be skipped if the switch already has initial zoning.

```
admin start
zoning edit
zoneset create customer_san
zone create customer_san zone1
zone add zone1 1,1
zone add zone1 1,2
zoning save
zoneset activate customer_san
```

If you need to review the existing existing configuration zoning, here are some helpful commands:

```
show toplology
zoning list
```
