

General

Why can't I access samba shares (after unjoining a domain or LDAP?)

Add map to guest=bad user to the global section of the smb.conf file and vlick on "Save".

```
sync always=no  
strict sync=no  
map to guest=bad user  
# ----- Sup
```

Give EVERYONE Simple All Control and click on "Save".

Configure Access Control

Share name: fs1

Share path: /fs_share/songmp [Browse...](#)

User/Group: Current user: fsuser Current group: fsuser

Access:

Access control list:

User/Group:

- CREATOR GROUP
- CREATOR OWNER
- administrator
- guest
- krbtgt
- james
- don

User/Group access:

User/Group	Access
EVERY ONE	Simple: AC

AC RW RO NP

AC: All control. RW: Read and Write. RO: Read Only. NP: No Permission.

Modify user or group

Save Cancel [Help](#)

Restart the service in a single node or synchronize the nodes in a cluster for the configuration to take effect.
