

# Mac Client

## How do you change HyperFS' Mac client automount time during boot?

Edit the file /Library/Filesystems/Enfs/config/enfsconfig.xml

Then find the following section:

```
<ConfigurationOption>  
<AutomountTimeoutS>45</AutomountTimeoutS>  
<BVDMDDeviceRefreshTime>3000</BVDMDDeviceRefreshTime>  
<Language>0</Language>  
<LogFullPath>/Library/Filesystems/Enfs/config/</LogFullPath>  
<LogLevel>0</LogLevel>  
</ConfigurationOption>
```

Change the AutomountTimeOutS to 90, or larger to see whether the automount will be ok. At the same time, please change the LogLevel to 3
